

Azure Chaos Studio Architecture

Simulating Zone Failures | Validating High Availability | Ensuring Resilience

1 User Traffic

Users access the application via Load Balancer / Traffic Manager.

2 Chaos Experiment

Azure Chaos Studio injects a zone failure (compute shutdown).

3 Traffic Failover

Load Balancer / Traffic Manager routes traffic to healthy zones.

4 Monitoring

Azure Monitor tracks health, performance and recovery.

5 Validation

Confirm high availability and measure recovery time.
